

Student #1 – Amanda

Hi Amanda, nice question. Nevertheless, I think that you might want to look at other aspects on how you will best achieve the answers to the question. But before that, I think that it is vital for you to first conduct a FINIER analysis of your research question. Finally, it sounds like you only intend to collect information from already existing literature, do you think such an approach will ensure that your findings are reliable, up to date and valid?

Student # 2 – Marwah

Hi Marwah, nice move. I believe that your research will now be more relevant with almost everyone since antibiotics are commonly taken by anyone. I am just wondering, how do you intend to collect your research data, I think it would be vital to get views from both the physicians as well as those who take antibiotics. In reference to your research question, I would advice that you first conduct a FINIER analysis of the question in order to establish whether it is feasible. Finally since I believe that you are not going to use sources of information obtained from Google search, can you probably name just a few of the literatures that you will using?

Student #3 – Hannah

Hi Hannah! I think your question is quite relevant to the study. Nevertheless, I am just wondering have you reviewed your question in reference to the FINER framework. If yes, what are some of the ethical issues do you think that you will encounter? Please can you clarify some of the approaches that you are going to use in your data collection process? Finally what are some of the measures that you will put in place in order to ensure that the study is not biased?

Student #4 - Chijioke

On commenting in your research subject, I believe that it is a very relevant topic. Coming back to the research question, I would suggest you first analyze the question in the perspective of the FINIER analysis in order to establish whether it is feasible as well as some of the ethical issues that you might be required to address. How are you going to collect data? Are you going to rely on already published information or are you going to conduct some primary research?

Student # 5 – Adriann

Hi Adriann, I think you need to rephrase your research question in order to ensure that it appears in form of a question. For example, the research question might read..What are the impacts of parental age on the diagnosis of autism? Apart from just reviewing periodic data for one year, I also suggest that you conduct some interviews with patients as well as specialists who treat autism in order to ascertain whether the information contained in the literature is relevant. Such an approach would ensure that your findings are more reliable and valid.

Student #6 – Susan

Nice question Susan. I am just wondering what are some of the ethical issues are you expecting to face when seeking answers to your research question? In addition, how do you intend to collect data for your study?

Student #5 – Kimberly

Hi Kimberly, well done for realizing that there is a need to establish the impacts that financial burden on treatment have on various families. I think that your research question is quite appropriate and would definitely play a big role in ensuring that the objective of the study is achieved. I am just wondering, how do you intend to collect data? I think that it is vital you conduct surveys with various families that have experienced financial burden of treatment in order to ensure that your findings are up to date.

WEEK 4 - GINA

Hi Gina, the proposed research is very vital and relevant since GTD is a common condition with various ladies. In your post, you have specified that you intend to conduct a prospective cohort study, what would be the size of the population? In addition, what are some of the approaches that you intend to adopt in order to ensure that the findings of your study are reliable?
